# Climate Finance Training (CliFiT)

## Private Sector Engagement in Climate Projects

### Why does it matter?

Private sector funds can **help address the gap** between the demand for climate and public sector resources. It can also contribute to the **achievement of global climate goals** by reducing the carbon intensity of their own operations, as well as autonomous climate proofing of privately-owned infrastructure, with the right incentives. The private sector can contribute **expertise and experience**, for example, in designing and operation of infrastructure projects. Finally, it can provide **climate products and services** that support others to reduce emissions and increase their climate resilience.

- The majority of global climate finance is provided by the private sector.
- Most private climate finance is provided by households, corporates and commercial financial institutions.

### What is the focus?

The training material enables climate project developers to gain a better understanding of different ways and mechanisms to engage the private sector, understand the mindset of private sector actors, and decode private sector jargon.

**Structure**

- Bankability from a private sector perspective
- Investment risks and opportunities as a result of a changing climate
- Financial instruments and de-risking mechanisms
- The role of public policy for private sector engagement.

**In-depth analysis**

Facts and figures, numerous concrete examples as well as detailed case studies allow for in-depth analysis and application of the training tools.

**Interactivity**

Highly interactive approach allows participants to directly apply training content while facilitating engagement with and feedback from their training peers for lasting networks.
